50 TON KNUCKLE BOOM CRANE

Client Profile:

The client serves the world's leading marine and offshore customers. We worked closely with the equipment division that manufactures a broad range of cranes, A-frames and winches.

Client Relationship:

Started in October 2013, we provided customs clearance, provided tugs & barges and sea fastening. Resulted in BLA managing to deliver the first ship crane for client within their budget and before their committed delivery date.

Project Profile:

BLA was appointed to move a 50 Ton Knuckle Boom Crane to be shipped from Singapore to Kobe, Jp. Challenge was to make delivery possible within client's budget and additionally meet the given delivery date. Instead of shipping the crane in assembled form, we had client to break down the crane into several manageable pieces. We found a suitable vessel to transport all of these into Japan. On top of that, we concurrently moved some electronics components and smaller parts in containers to the same destination. Coordination for both modes were entirely planned and executed by Ben Line.

Project Summary:

Challenges Faced:

- Challenging yard space limitations required early road transportation and storage requirements.
- Surveying the broken down crane with MWS to create a safe transport method.
