# VESSEL LIFTING EQUIPMENT

## Client Profile:

Founded in 1992, our client is a global offshore oil and gas specialist providing marine, construction, production and well services to multinational, national and independent oil, gas and renewable energy companies.

## Client Relationship:

Started in 2013, BLA was awarded numerous jobs for our clients mainly shipping supplies to their vessels, and transportation arrangement of various shipments via airfreight and seafreight.

## Project Profile:

BLA was appointed to transport 4 reels of 47 ton steel wires from Italy to Gabon. Our duty was to fix a vessel from Trieste to Antwerp, as well as transport several other packages via truck. From there, there would have another transport, to move the items to their final destination in Gabon, Port Gentil. The move took 21 days

## Project Summary:

### Challenges Faced:

- Finding a Vessel to Trieste due to slow frequency of transport facilities
- Time constraints as clients were looking for a quick move
- Vessel routing to find the quickest route to the destination and not to waste time on detours
