# WIRE REELS SHIPMENT

## Client Profile:

Engineering, procurement, construction and installation (EPIC) company specializing in complex offshore oil and gas projects

## Client Relationship:

Started in September 2014, after a successful 600 cbm breakbulk shipment.

## Project Profile:

BLA was appointed to move 5 wire reels [Heaviest piece was 275 tons each, with dims LWH: 9.73 x 6.64 x 9.73m)] & 6 offshore containers from Hartlepool, UK to Batam (Indonesia).

Loading was performed using ship's cranes while discharge was through the use of a shore crane.

As Ben Line was also the vessel agent, we were able to advise accurately and timely on the entire loading / discharging process.

## Project Summary:

### Challenges Faced:

- Helping client deal with stringent requirements from MWS
- Documentation – inconsistent paperwork hindered custom clearance
